ProImage NewsWay

The NewsWay software platform is the foundation on which every NewsWay system is built.

It is the core that provides the unique features of all ProImage products. The key features of the NewsWay platform are –

Web Server Based

NewsWay has been built as a Web based software platform from ground up. As such, none of the Web and Browser related features of NewsWay are add-ons but are an integral part of the software solution. The NewsWay platform is the software foundation on which the user, through a browser, may interact with the powerful plugged-in modules of NewsWay.

The Web Server foundation of NewsWay gives high visibility to all functions of any NewsWay system throughout the entire enterprise, be it on a Local or Wide Area Network. It even provides visibility through the Internet for authorized users.

The NewsWay platform also allows for very easy software upgrades. As the core software resides on the Server and the workstations are simply Web Browsers, all that is needed is to upgrade the software in the Server. Unlike most other software applications, users do not need to upgrade each workstation.

We make complex publishing simple.
